CONVERSION TO PAPERLESS ELECTRONIC COUNTS

Case Study: Warehouse – Commercial and Domestic Appliance Provider

A commercial and domestic appliance provider with over 40 years' experience stocks a wide range of domestic and commercial appliances. This includes washing machines, washer dryers, tumble dryers, dishwashers, cookers, ovens, hobs, spin dryers, microwave ovens, vacuum cleaners and small appliances. They also stock a large selection of spare parts.

REQUIREMENT

A large commercial and consumer appliance service provider wanted to **convert from paper and pen counts to electronic counts**. The equipment service provider required evidence that the electronic process would be less expensive, so required RGIS to provide the following:

- **Evidence** that the electronic process would be less expensive
- Use the existing, **manual process for two years** before switching over
- All **27 locations** had to be counted in one night
- The existing **pen and paper process** had to be used to complete the initial inventories
- A new program **utilizing new technology** had to be developed

SOLUTION

The commercial and domestic appliance provider partnered with RGIS to complete the **electronic paperless inventory project**, and provided following:

- The move from manual process to electronic occurred **over three years**
- For the first two years, experienced RGIS teams accurately completed **all counts with pen and paper** in one night
- The third year, the **RGIS equipment and software was implemented** into the inventory program, to move to an electronic process
- RGIS' proprietary software and hardware allowed for a **quick data return** and an **easy inventory process**

RESULTS

The commercial and domestic appliance provider found by outsourcing the **electronic paperless inventory project** to RGIS, the following was achieved:

- The first year, RGIS was able to **accurately determine the actual cost** of the customer's manual inventory
- Due to the complicated manual process, each location **cost an average of $2,280** to complete
- After implementing the **RGIS inventory software**, each site **cost an average of $670**
- RGIS provided more **efficient inventories** with no disruption to the team's regular work
- There was an **average savings of $1,615 per location**
- The new process was much **less labor intensive** and thus **less expensive**

By outsourcing to RGIS, the commercial and domestic appliance provider found that an average of **$1,615 could be saved per location**, by **utilizing RGIS tablet technology**
